DETAILED ACTION

Specification

1. The abstract of the disclosure is objected to because it should be 150 words or less. Correction is required.

See MPEP § 608.01(b).

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Cok et al(US 4,573,023)

The reference by Cok et al discloses a phase lock loop(see figure 1, and col. 2. line 42-col. 3, line 17), where the general PLL description is provided. This includes a reference frequency input(10), a VCO(18), a loop filter(16) and phase detector(14) coupled to the loop filter and vco. A frequency ratio generator means is shown(see dashed block 34), and as noted in col. 8, lines 6-22, for example, fractional division in multiples of 1/50(Fr, reference frequency), that is, a desired frequency(VCOoutput) is obtained based on this fractional expansion, which is the fractional division in multiples of 1/50 of Fr, or 20 kHz increments of frequency.
